

YOUR VACCINE SAFETY

REPORTING ADVERSE REACTIONS

As you may know, the COVID-19 vaccines and boosters were created within a year of COVID-19 being detected. This means that the safety and effectiveness aren't fully established yet.

It is important – even if you do not understand how it might relate to your vaccination or booster – that you record and report unwelcome changes in your health after taking any COVID-19 vaccine.

WHAT DO I REPORT

Regardless of what it could be attributed to, you should report any new medical condition that appeared after COVID-19 vaccine or booster, such as:

COVID-19 >< heart and kidneys conditions >< inflammatory conditions >< blood clots >< skin rashes >< neurological complications (eg. Bell's palsy, dizziness) >< cancer and cysts >< heart attack or stroke >< menstruation disturbance >< your existing condition, if your current illness has worsened after vaccination.

REPORT ALSO

If parents were vaccinated before pregnancy, or mother while pregnant, they should report: miscarriages >< stillbirths >< birth defects and sudden deaths of a newborn.

HOW TO REPORT

Please report adverse reactions to The Health Products Regulatory Authority.
